

# MUSCULAR SYSTEM

a set of tissues in the body with the ability to change shape. The most obvious function of the muscular system is movement.

# FLEX

to bend; to move a joint in such a direction as to approximate the two parts which it connects

# EXTEND

to straighten a limb, to diminish or extinguish the angle formed by flexion; to place the distal segment of a limb in such a position that its axis is continuous with that of the proximal segment.

# HEART

a muscular organ composed of smooth muscle that pumps blood throughout the body
